the periodic table based on their electron configuration. Elements are organized into different blocks in the periodic table according to their electron configurations.

Section 6.2 Classification of the Elements

These groups include alkali metals, ore-forming elements, alkaline earth metals, halogens and noble gases. The modern periodic table suffers from several limitations. In the table, the position of hydrogen continues to remain ambiguous. Inner transition elements are placed separately in the table as they do not find any position in the table.
