Calculate the equation of the circle that has its center at $(2, -3)$ and has the x -axis as a tangent. In this question, the circle has an x -axis as a tangent. A tangent is a straight line that touches a curve. This means that the "y coordinate" will be zero. We will use the distance formula to

Answer. The equation

Download Free Analytic

is in the form $(x - h)^2 + (y - k)^2 = r^2$, so we have a circle with centre at $(2, 3)$ and the radius is $r = \sqrt{16} = 4$.

1 2 3 4 5 6 -1
-2 -3 1 2 3 4 5 6 7 8 -1
x y (2, 3) r = 4

Definition of circle The locus of point that moves such that its distance from a fixed point called the center is constant. The constant distance is called the radius, r of the circle. General Equation ($C = A$)
From the general equation of conic sections, $C = A$.
Hence, the equation

Solutions. Problem 1.

Find the distance between A (5, -3) and B (2, 1). Solution: The distance between two

points A (x_1 , y_1)

$\displaystyle A (x_1, y_1)$ and B (x_2 , y_2)

$\displaystyle B (x_2, y_2)$ B (x_2 , y_2) is

given by the formula:

$$\text{Distance} = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

& Examples Circle

In analytic geometry, also known as coordinate geometry, we think about geometric objects on the coordinate plane. For example, we can see that opposite sides of a parallelogram are parallel by writing a linear equation for each side and seeing
