~~Sound Waves Answer~~

Answer : The vibration of the medium that travels along or parallel to the direction of the wave is called a longitudinal wave. In a sound wave, the particles of the medium vibrate in the direction parallel to the direction of the propagation of disturbance. Hence, a sound wave is called a longitudinal wave.

Write down three differences between a sound wave and lightwave. Answer: Sound wave: It travels in the form of longitudinal waves. It requires a medium for its propagation. It travels through air with a speed of 332 propagation. m/s at 0°C. Lightwave: It travels in the form of a transverse wave. It does not require a medium for its propagation.

~~Sound Class 9 Extra Questions and Answers Science Chapter 12~~

Answer: Sound follows the same laws of reflection as light does. The incident sound wave and the reflected sound wave make the same angle with the normal to the surface at the point of incidence. Also, the incident sound wave, the reflected sound wave, and the normal to the point of incidence all lie in the same plane.
