Organized according to anatomic site, this excellent atlas covers the pathology of the pituitary gland, thyroid gland, parathyroid glands, pancreas, and adrenal glands. The comprehensive pictorial text is supplemented with pertinent clinical details and special pathologic techniques. Individual chapters cover diseases of the pituitary, thyroid, parathyroid, and adrenal glands and the exocrine and endocrine pancreas, multiple endocrine neoplasia syndrome, and endocrine organ manifestations of HIV/AIDS. High quality color photographs illuminate the gross pathologic, histomorphologic, histochemical, and immunocytochemical features of endocrine diseases. A consistent organization for the discussion of each disease makes reference easy, providing clinical and radiographic parameters, pathologic features, differential diagnosis, treatment, prognosis, and additional clinically relevant facts. A section on anatomy, embryology, and histology reviews each organ's normal features. Pathology coverage discusses fine needle aspiration findings, gross features, and histopathology -- as well as histochemistry, immunohistochemistry, and electron microscopy. A multitude of charts contrast the clinical and pathologic features of similar lesions.

Atlas of Endocrine Pathology provides a comprehensive compendium of photomicrographs of common and uncommon entities in endocrine pathology. The volume includes histologic features of normal features, reactive conditions, hyperplasia and tumors. The most helpful diagnostic features are illustrated to provide direction and clues to the diagnosis of endocrine tumors. Furthermore, photomicrographs highlight the most pertinent diagnostic features in problematic diagnoses in endocrine pathology. Authored by a nationally and internationally recognized pathologist, Atlas of Endocrine Pathology is an important learning tool for those becoming familiar with the diverse entities encountered in endocrine pathology and a valuable reference for practicing pathologists faced with challenging diagnoses in endocrine pathology.
