The aperture is the size of the opening in the lens through which light is allowed to pass whenever the shutter is opened – the larger the aperture, the more light passes through. The aperture is measured in 'f-stops' and is usually displayed using an 'f-number', e.g. f/2.0, f/2.8, f/4.0, f/5.6, f/8.0 etc, which is a ratio of focal length over diameter of the opening.

Our guide to Nikkor lenses, the lenses made by Nikon to fit Nikon cameras, looks at their lens line up. Fisheye lenses have an ultra wide-angle of view, and bend and distort objects at the edges of the frame

**Beginner's guide to Nikkor lenses – What Digital Camera**

Macro zoom lenses are among the most versatile for DSLR cameras, with a wide range typically around 40-200mm. At 70-300mm, this Tamron lens is ideal for handheld shooting, particularly nature, wildlife, sports, and portraits. Like any macro lens, images will come back sharp and highly focused—almost too focused, if there is such a thing.

**The 8 Best Lenses for DSLR Cameras of 2020**

DSLR Lenses Having the right lens for your DSLR camera will determine how your images or footage will appear. And there are plenty to choose from. A lens of a camera is the easiest way for a photographer to manipulate the image that's projected onto a camera's imaging sensor.

**The 3 DSLR Lenses You Need (and 2 More You'll Crave)**

The only way you can retain the face-friendly attributes of an 85 to 100mm portrait lens on a Canon APS-C format DSLR is to use an 85 to 100mm portrait lens and step back about 40% further from your subject in order to fill the frame to head-and-shoulder proportions. When shopping for your next lens, keep this information in mind.

**Canon DSLR Lens Buying Guide | B&H Explora**

So a standard DSLR kit zoom lens with a focal length of 18-55mm on, say, a Nikon cropped body, would actually give an equivalent coverage of 27-82mm. This means if you want 50mm standard coverage on a Nikon cropped DSLR, you'll actually need to use a lens with a 33mm focal length (35mm models are closest).

**DSLR lens guide: focal length and coverage | DSLR Tips**

The focal length of a DSLR camera lens refers to the distance (in millimeters) from the point of convergence in your lens to your camera's sensor when the subject is in focus. It tells you how much of the scene will fit in your snaps.

**5 Best DSLR Camera Lenses – Nov. 2020 – BestReviews**

Some of these lenses are found to rival or better the largest DSLR manufacturers. If your budget is tight, opting for a third party manufacturer is a great option. My Sigma 85 mm f/1.4 is half the price of the Canon version, and the sharpness is unparalleled.

**Camera Lens Guide (Parts, Functions and Types Explained!)**

The AF-S NIKKOR 50mm f/1.8G is also a popular lens for shooting with DX format cameras, offering almost the exact field of view that the human eye sees. Ultimately, knowing which lens is your next lens is really a matter of first knowing the type of photography you love and then simply following your passion.
