The sun's path is an apparent path across the sky. Each day, the sun appears to move in an arc across the sky at a rate of 15°/hour, the rate that the Earth rotates on its axis. The sun is at its highest point at Solar Noon. In this lab, you will use a plastic hemisphere to represent the dome of the sky.

Earth Science Suns Path Lab Answers | datacenterdynamics.com

As Earth orbits the Sun, the tilt causes the direct rays of the Sun to strike locations between the Tropic of Cancer (23.5 deg N) and the Tropic of Capricorn (23.5 deg S). New York is generally located between 41 ° deg N and 45 deg N latitude, so it never receives the direct rays of the Sun. In other words, the Sun will never be found directly overhead (zenith) at solar noon during any point of the year for a location in NYS.
