Error codes or fault codes is a digital display of signals about the malfunction of the truck systems supplied by the built-in diagnostic module. As they occur, error codes are recorded in the engine control unit (" brains " on professional slang), which allows you to restore the error history and make the most complete diagnosis.

SPN 1081 or Cummins code 3494 is for wait to start malfunction. There is 2 possible issues. First and more common is the driver did not wait to start and engaged starter before system completed a pretest. The light and code stays active for 3 key cycle events before going out. The second is a possible malfunction with the grid heater in the system not activating.
