Trigonometry is the branch of science that studies triangles, paying particularly close attention to the measurements between the triangle's points and the angles of the triangle's three corners. Trigonometry is used for a variety of fields, including tailoring, landscaping and architecture. One great reason for people studying trigonometry to have charts is that there are many different formulas used to determine angles and measurements. Having a chart that showed different kinds of triangles and the formulas associated with them is quite handy!

The 100+ Series, Algebra, offers in-depth practice and review for challenging middle school math topics such as radicals and exponents; factoring; and solving and graphing equations. Common Core State Standards have raised expectations for math learning, and many students in grades 6-8 are studying more accelerated math at younger ages. As a result, parents and students today have an increased need for at-home math support. The 100+ Series provides the solution with titles that include over 100 targeted practice activities for learning algebra, geometry, and other advanced math topics. It also features over 100 reproducible, subject specific, practice pages to support standards-based instruction.

Offering an overview, this guide details how 3GIO allows designers to overcome the practical performance limits of existing multidrop, parallel bus technology and explains how to increase performance and new capabilities for a broad range of computing and communications platforms.

KEY BENEFIT: Statistical Reasoning for Everyday Life, Third Edition, teaches students how to be better consumers of information by showing the role of statistics in many aspects of everyday life. This text uses real examples and case studies to build an understanding of the core ideas of statistics that can be applied to a variety of subject areas. The authors include data from real sources to help students become better critical thinkers and decision makers, whether they decide to start a new business, plan for their financial future, or just watch the news. KEY TOPICS: Speaking of Statistics; Measurement in Statistics; Visual Displays of Data; Describing Data; A Normal World; Probability in Statistics; Correlation and Causality; From Samples to Populations; Hypothesis Testing; t Tests, Two-Way Tables, and ANOVA. MARKET: For all readers interested in statistics.

The National Council of Teachers of Mathematics has established curriculum standards for early childhood math skills. Preschool Math features creative, developmentally appropriate activities that directly address these standards. Children will have fun learning about patterns, sorting, numbers, measuring and shapes. Each of these units features activities that encourage interaction and communication, healthy food themes, ready-to-use reproducibles and fundamental mathematical concepts. Give children a foundation for learning that will pave the way for future confidence and success in mathematics. It's as basic as 1-2-3!

Linguistics and the Teacher is a collection of essays by linguists on different aspects of the relationship between linguistics and education. All the contributors are united in their belief that linguistics should be a central element in the education of teachers, and argue for principled and systematic analysis in the study of the role of language in learning. The essays range from theoretical accounts of the nature of language study in teacher education to practical examples of how linguistics can help the teacher in such diverse contexts as the assessment of difficulty in textbooks, the teaching of literature, and analysing children's writing. The book offers models for analysis, specific syllabus and course proposals, and, in a key essay, discussion of those areas relevant to language and learning upon which most linguists would agree. The collection as a whole presents teachers with all the materials they need to make informed judgements about what has hitherto been regarded as a difficult area.

Practical information for artists trying to sell their work. Formatted in a workbook style with fill exercises and examples.

Sheep hunt for a birthday present and make havoc of the shop, only to discover they haven't the money to pay for things.
