Business Intelligence (BI) and Performance Management (PM) [the development and delivery of business insight for users and the management of execution based on that insight [are two solution-types that promise to bring great value to enterprises. Yet most organizations haven't yet realized the elusive bene?ts of these two important disciplines. The reasons for this are manifold. However, the primary causes are the culture of the organization and it leadership. This is a topic, which I've addressed at length in my latest book: Pro?les in Performance [Business Intelligence Journeys and the Roadmap for Change. The culture and leadership of the organization determines the importance and strategic intent surrounding the use of BI and PM. Sadly, most organizations lack the motivation to embrace transparency and accountability [or to align with the strategy of the organization [enabling execution and coordination in unison with the mission. However, once an organization and its leadership are ready to take a step towards real change [creating an environment of openness, sharing and alignment [with BI and PM as its centerpiece [the next question then becomes one of [how and where to begin]? Even with great strategic intent, missteps in the development and deployment of BI and PM can cause disillusionment and disappointment [lending support to the naysayers of the organization [and leading to failure and abandonment of these critical programs.

Do we really know the critical phenomena that are linked to how enterprises function and the dynamics of their relationships with customers, suppliers and competitors? Are their decision-making processes founded upon a set of performance measurements that were accurately designed and systematically elaborated? The above questions are the focus of this book, as is the following premise: enterprises need a system to measure their critical performances so they can be managed effectively; metaphorically speaking, enterprises need a [management dashboard] to serve as a navigational aid. A dashboard to show [with as few distortions as possible [the pattern of key variables that characterizes the specific formula enterprises use to face their competitive and social environment.

The Balanced Scorecard translates a company's vision and strategy into a coherent set of performance measures. The four perspectives of the scorecard--financial measures, customer knowledge, internal business processes, and learning and growth--offer a balance between short-term and long-term objectives, between outcomes desired and performance drivers of those outcomes, and between hard objective measures and softer, more subjective measures. In the first part, Kaplan and Norton provide the theoretical foundations for the Balanced Scorecard; in the second part, they describe the steps organizations must take to build their own Scorecards; and, finally, they discuss how the Balanced Scorecard can be used as a driver of change.

This book discusses the tasks and functions of corporate governance in the light of current challenges and the dynamics that arise from a broader approach to company management and the integration of corporate governance with corporate social responsibility (CSR) and sustainability. Addressing the corporate governance shortcomings that are believed to have contributed to the recent financial crisis, it explores the interplay between corporate governance and CSR, and includes examples of company practice to show how such changes affect the practices of shareholders, boards of directors and regulators. In particular, the book examines shareholders' activities, their different investment strategies, specific reporting expectations and the submission of proposals to the annual meeting. Further, for boards of directors it explores the need to revise their tasks with respect to the criteria for executive appointments, their corporate strategy, performance measures and diversity recommendations, while for directors it provides recommendations to reconsider the structure of executive pay and performance incentives. Lastly, for regulators the book investigates the need to introduce new laws addressing, for instance, the need for integrated reporting, limiting the voice of short term oriented shareholders and providing guidelines for executive compensation.
