Epithelium consists of closely packed, flattened cells that make up the inside or outside lining of body areas. There is little intercellular material. The tissue is avascular, meaning without blood vessels. Nutrient and waste exchange occurs through neighboring connective tissues by diffusion. The upper surface of epithelium is free, or exposed to the outside of the body or to an internal body cavity.

Tissue Study Guide For Anatomy - Southern Vermont College

Smooth Muscle and Cardiac muscle are involuntary. Describe the function and location of nervous tissue. Nervous tissue is located in the brain, spinal cord and the peripheral nerves. It regulates body actions, and is associated with receptors and effectors. Receptors. Send message to brain. Effectors.

Anatomy: Tissue Study Guide: Flashcards | Quizlet

Skeletal muscle consists of long cylindrical cells that, under a microscope, appear striated with bands perpendicular to the length of the cell. The many nuclei in each cell (multinucleated cells) are located near the outside along the plasma membrane, which is called the sarcolemma.

Muscle Tissue - CliffsNotes Study Guides

There are four basic tissue types defined by their morphology and function: epithelial tissue, connective tissue, muscle tissue, and nervous tissue. Epithelial tissue creates protective boundaries and is involved in the diffusion of ions and molecules. Connective tissue underlies and supports other tissue types.
