### Understanding Shutter Speed : Creative Action and Low ...

The 180° Shutter Rule states that your shutter speed should be set to 1/frame rate x 2. So at a frame rate of 24 fps, the correct shutter speed is 1/48 sec. For 30 fps, a 180° shutter would be 1/60 sec. Since digital still and video cameras do not use a rotary shutter, some shutter speeds may not be available. To achieve normal motion blur in your footage, you can use the closest shutter speed.

### Understanding video frame rate and shutter speed - Kevin ...

Shutter speed is the exact time of exposure: the time that your camera records an image for. In all cameras, there is a shutter mechanism that determines when light hits the sensor. When we take an image, the shutter opens up for a given amount of time. This length of time is the shutter speed.

### What is Shutter Speed? (And Why it Matters in Photography)

There's no actual shutter movement taking place. Electronic shutters can also reach a much faster shutter speed – up to 1/32000. With a mechanical shutter, you're usually limited to 1/8000 or slower. This means that you can freeze fast-action more easily, and photograph very bright scenes with a wide aperture without blowing out detail.

### What is Shutter Speed in Photography?

Every camera has a physical shutter, like a curtain, that opens and closes to expose the sensor to the light coming in through your lens when you press the shutter button. The length of time that this shutter is open is called the shutter speed and also sometimes referred to as 'exposure time'. Shutter speed is one of the three sides of our exposure triangle, along with aperture and ISO, that allow us to control the brightness of our image.

### Understanding Shutter Speed + Shutter Speed Chart

Shutter speed: 1/1600th second (a fast shutter speed) All of the above is achieved by simply controlling the shutter speed. In summary, quick shutter speeds freeze action, while long ones create an effect of

motion when you photograph moving objects.

Shutter speed is exactly what it sounds like: It's the speed at which the shutter of the camera closes. A fast shutter speed creates a shorter exposure — the amount of light the camera takes in — and a slow shutter speed gives the photographer a longer exposure. "Shutter speed gives you two things.
